Why get vaccinated?

Influenza vaccine can prevent influenza (flu).

women, and people with certain health conditions or a weakened immune system are at greatest risk of flu children, people 65 years of age and older, pregnant Flu is a contagious disease that spreads around the United States every year, usually between October and May. Anyone can get the flu, but it is more dangerous for some people. Infants and young complications.

infections are examples of flu-related complications. disease, cancer or diabetes, flu can make it worse. Pneumonia, bronchitis, sinus infections and ear If you have a medical condition, such as heart

though this is more common in children than adults. aches, fatigue, cough, headache, and runny or stuffy nose. Some people may have vomiting and diarrhea Flu can cause fever and chills, sore throat, muscle

Each year thousands of people in the United States vaccine prevents millions of illnesses and flu-related die from flu, and many more are hospitalized. Flu visits to the doctor each year.

Influenza vaccine N

6 months through 8 years of age may need 2 doses during a single flu season. Everyone else needs only CDC recommends everyone 6 months of age and older get vaccinated every flu season. Children dose each flu season. It takes about 2 weeks for protection to develop after raccination.

cause disease in the upcoming flu season. Even when protect against three or four viruses that are likely to the vaccine doesn't exactly match these viruses, it changing. Each year a new flu vaccine is made to There are many flu viruses, and they are always may still provide some protection.

Influenza vaccine does not cause flu.

Influenza vaccine may be given at the same time as other vaccines.

Talk with your health care provide ო

Tell your vaccine provider if the person getting the vaccine:

- dose of influenza vaccine, or has any severe, life-Has had an allergic reaction after a previous threatening allergies.
 - Has ever had Guillain-Barré Syndrome (also called GBS).

In some cases, your health care provider may decide to postpone influenza vaccination to a future visit.

vaccinated. People who are moderately or severely ill should usually wait until they recover before getting People with minor illnesses, such as a cold, may be influenza vaccine.

Your health care provider can give you more information
